

Cross-coupling sweep — run report

RUN

221429_cross-sweep_phi2-sweep

Status: completed | Started: 2026-09-25T21:14:29.741264+00:00

PURPOSE

Sweep one V_{λ} at each fixed-axis bias across the other V_{λ} .

REQUIRED OPTICAL SETUP

PAX at final output; both paths open unless prompted.

RECORDED BENCH CONTEXT (RECIPE)

In front of NPBS 1, C port

Red Pitaya (0-1 V command) -> Thorlabs MDT690 -> piezo

RUN COMMENT

exact same as previous run but sweeping ϕ_2

OPERATOR SETUP NOTES

V_{π} expectation only; verify channel and measured driver gain before calibration.

DATA

1,716 recorded samples; acquisition: 1,716

Source: data.csv; full acquisition settings: recipe.json; status: run.json

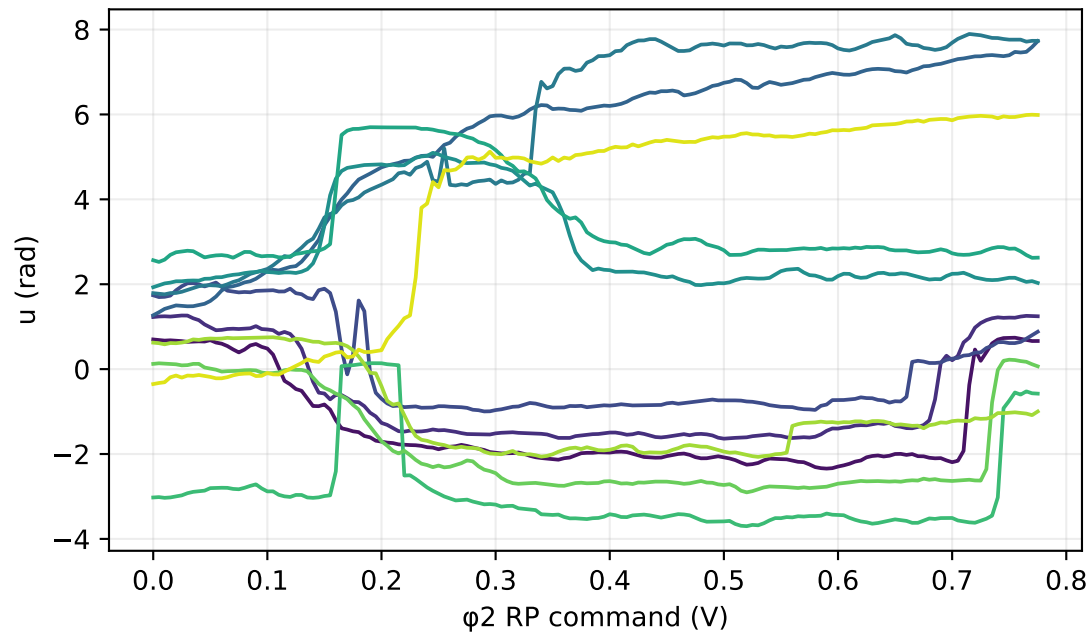

RAW DOP

Mean 0.8087; range 0.0474 to 0.9892. 0 samples outside 0–1. Telemetry is not a new calibration.

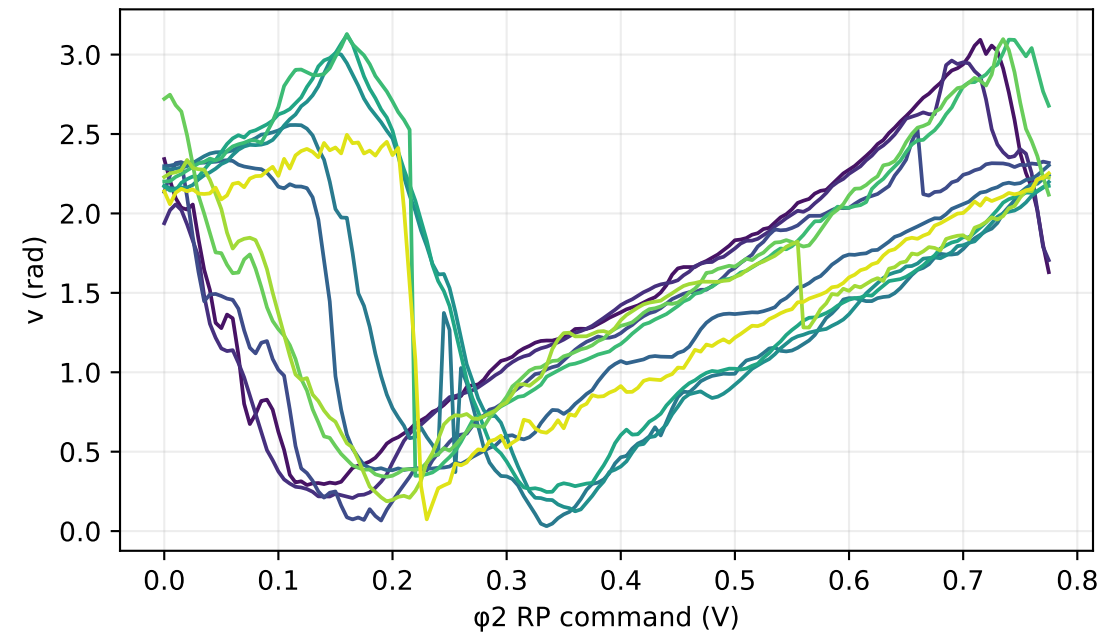

Cross-sweep bias relation — 221429_cross-sweep_phi2-sweep

swept ϕ_2 ; fixed ϕ_1 bias

Azimuthal response (unwrapped)

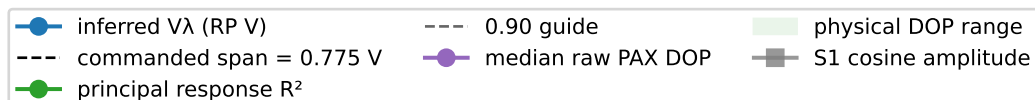

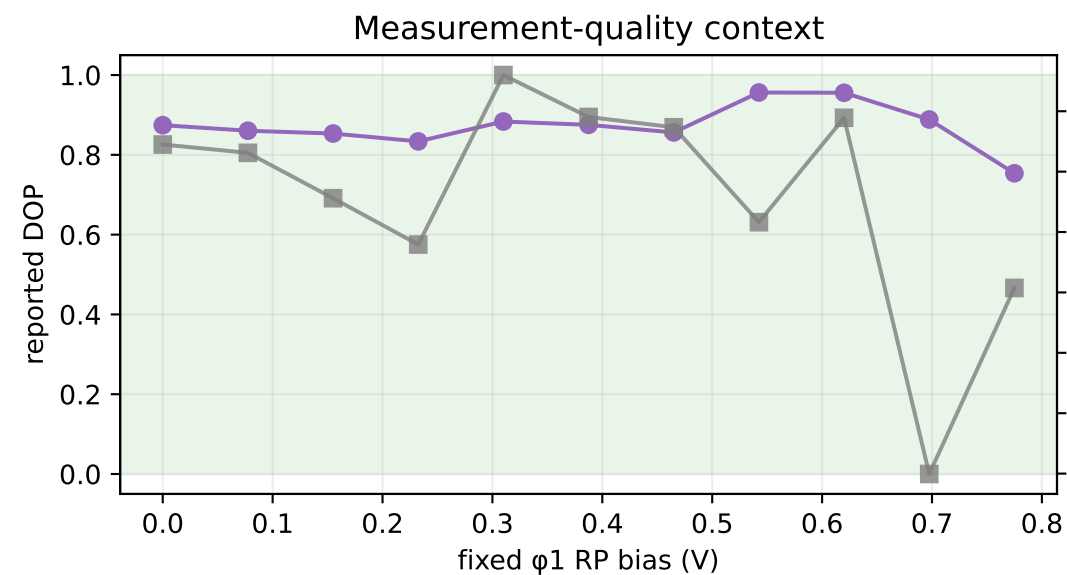

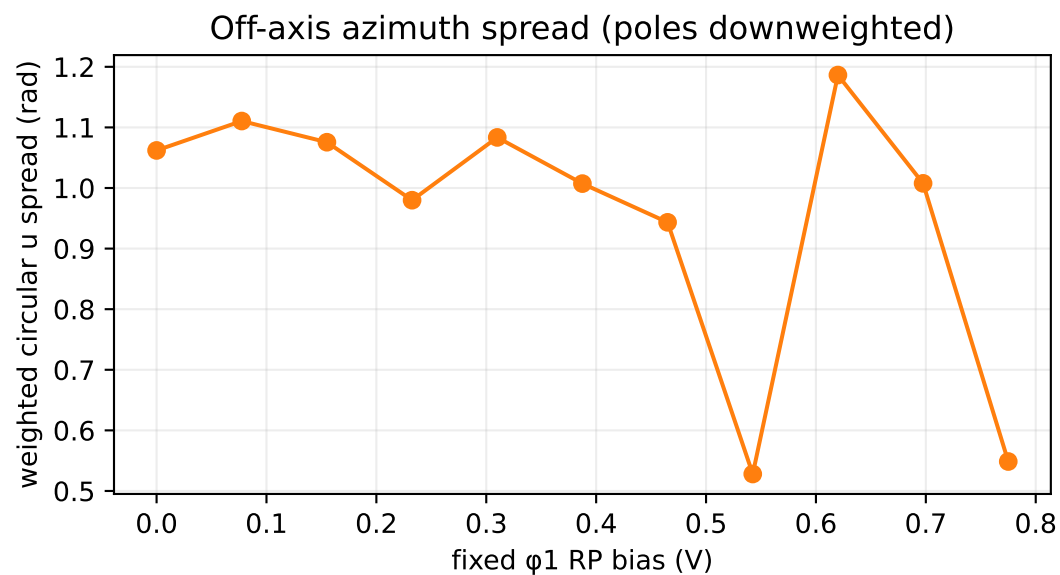

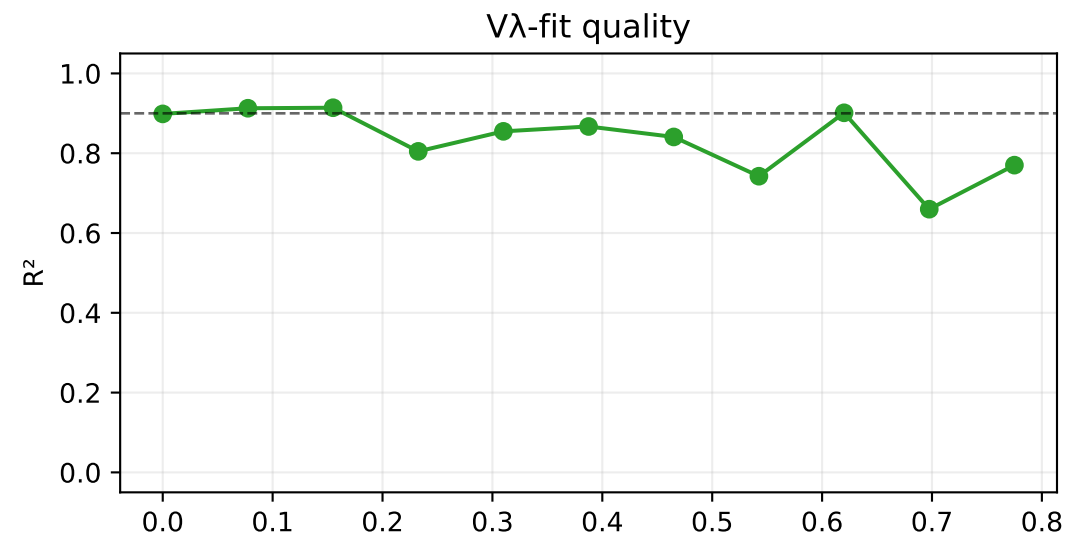

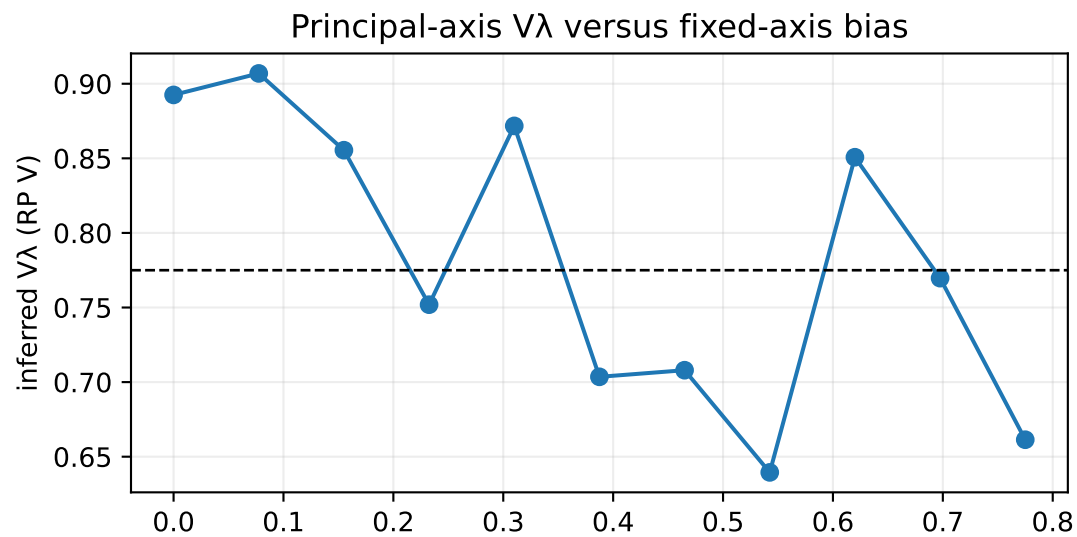

Polar response

Recorded fixed bias

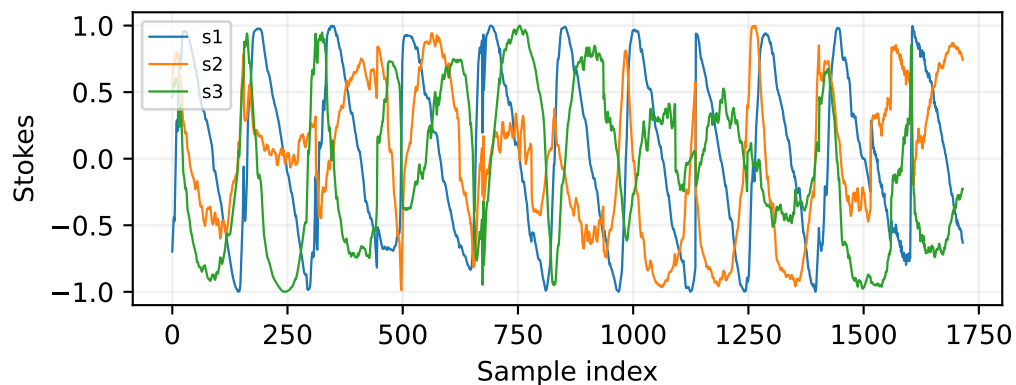

Cross-coupling summary — 221429_cross-sweep_phi2-sweep — swept ϕ_2 , biased ϕ_1

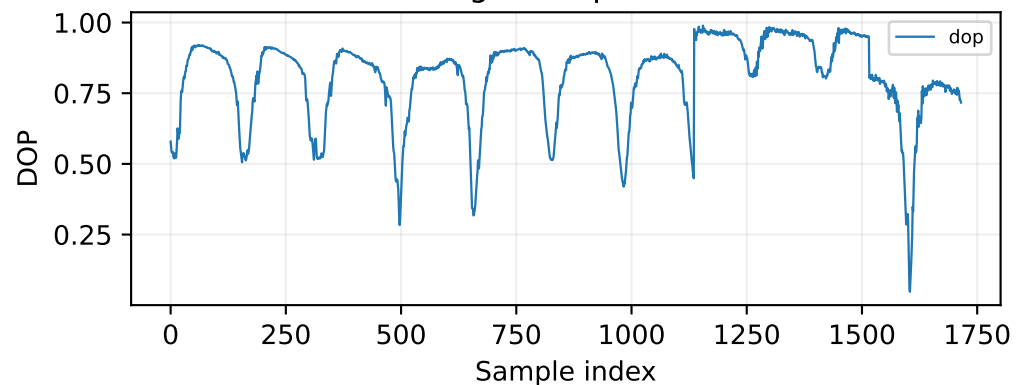

Recorded telemetry

Acquisition order preserves stage changes; no timing alignment or transfer gain is inferred.

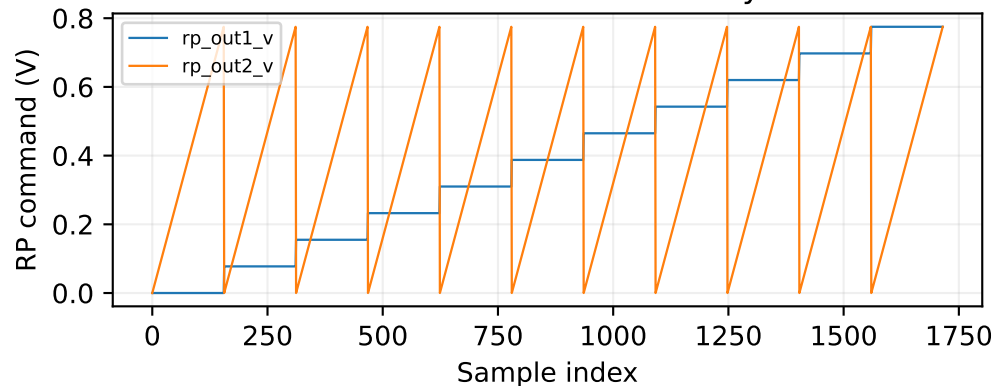

Normalized Stokes

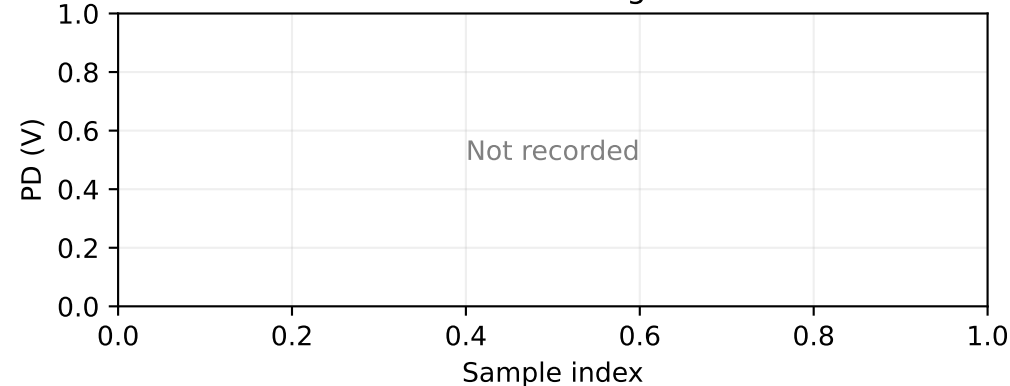

Raw degree of polarization

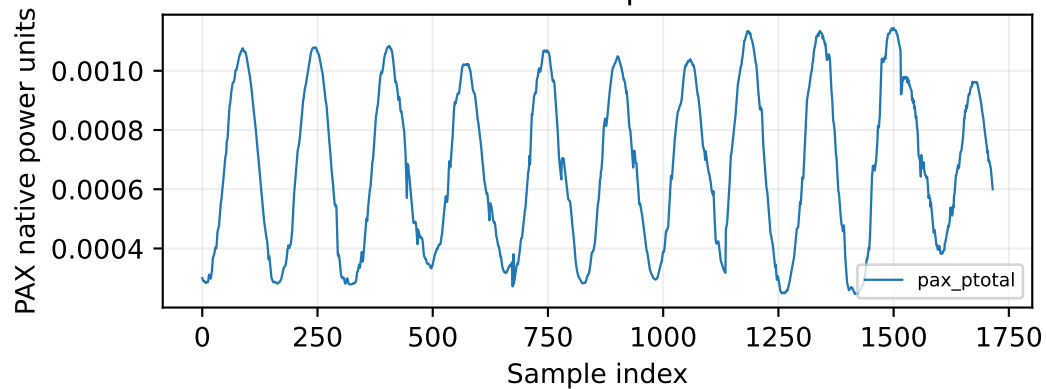

Actuator command history

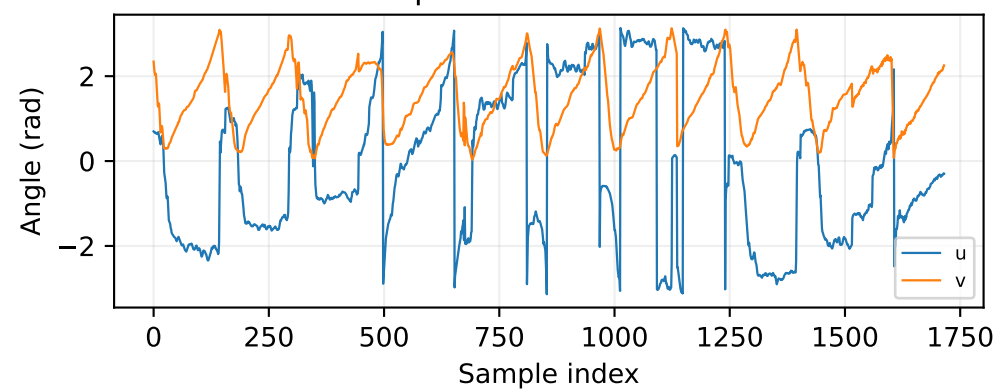

Photodiode signal

PAX total power

Sphere coordinates

Active parameters

RP commands: volts, bounded to 0–1. V_lambda: terminal volts for 2π. Gains: terminal V / RP V.

Parameter	Recorded value
label	"phi2-sweep"
comment	"exact same as previous run but sweeping phi2"
