

Phi1 PD FPGA lock — 003117_phi1-pd-lock-test_phi1-pd-lock-1

PAX-assisted ϕ_1 rough map

PD value associated with rough u map

Automatic local PD calibration

FPGA PD lock

PD locking error

Continuous FPGA actuator output

Independent PAX azimuth validation

PAX polar-angle cross-check

Held lock trajectory on the Poincare equator

Interpretation

- Tight cluster near the red star: PD lock preserves the selected u branch.
- Motion around the circle: residual ϕ_1/u drift or branch movement.
- Radial motion: polarization is leaving the ideal equator.
