

Phi1 PD FPGA lock — 004609_phi1-pd-lock-test_phi1-pd-lock-2

PAX-assisted $\phi 1$ rough map

PD value associated with rough u map

Automatic local PD calibration

FPGA PD lock

PD locking error

Continuous FPGA actuator output

Independent PAX azimuth validation

PAX polar-angle cross-check

Held lock trajectory on the Poincare equator

Interpretation

- Tight cluster near the red star: PD lock preserves the selected u branch.
- Motion around the circle: residual $\phi 1/u$ drift or branch movement.
- Radial motion: polarization is leaving the ideal equator.
